TFT Transformer Nozzle System - EV Config 1.5" FBSP Thread

The Transformer Nozzle System EV-Kit is designed to help you deliver water to the underside of an electric vehicle where the battery is stored. The system over 7' long (2.2 meters) and weighs only 14.9 pounds (6.8 kg) when fully assembled.

The included distributor nozzle provides a wide fully filled pattern capable of flowing up to 150 GPM (570 LPM) at 100 PSI (7 bar). The twist-grip shutoff valve regulates flow without the need for an additional shutoff valve.

Flow up to 150 GPM (570 LPM)

Twist-grip shutoff valve

Cellar nozzle with fully filled wide pattern

Weight	7.7kg
Type	Speciality
Inlet Coupling Style	Rocker
Remote Control	N
Inlet Coupling Swivel	Full Time Swivel
Straight Tip	No
